modulus

Fields of expertise:

VoIP, vPBX, satelite communications, wholesale voice termination, speech-to-text and more)

A Greek communications company, which provides new generation telephony services. The high quality of services provided is ensured by the many years of experience of its human resources (active since 2012), as well as by the international collaborations it has developed with industry leaders worldwide.

As the leading VoIP service provider in the domestic market, modulus has made a decisive contribution to the digital transformation of companies operating in multiple sectors, with solutions that unlock their communication capabilities while eliminating the high costs of conventional telephony.

Modulus is one of the first companies to introduce the "digital call center - vPBX" service in the domestic market, a solution that ensures the smooth transition and full functionality of corporate communication in the "era of remote work", without the need for high costs investment in privately owned facilities and equipment. In addition, modulus offers wholesale voice termination, innovative telephone applications such as speech-to-text, as well as telephony integrations with popular third party applications.

rhoé
URBAN TECHNOLOGIES

Fields of expertise:

Clean energy; Energy Efficiency; Energy-as-a-Service

Rhoé leads the development of the Energy-as-a-Service, a swappable battery network for electric ships that makes sure that vessel owners have the clean energy they need, when they need it at a competitive price. Rhoé's expertise on sustainable maritime software has been a central part of projects with Wartsila, DAMEN, Kotug, Lloyd's Register, Sensata, the port authorities of Rotterdam and Thessaloniki and many more. In fact, the company builds optimization software that bridges carbon-neutral forms of energy with bleeding edge transportation technologies. We aspire to make mobility sustainable, accessible and affordable.

Rhoé can provide valuable skills to companies that are involved in a variety of projects, such as transportation modelling and predictive models, energy usage optimization, ESG models and reporting, data analytics, machine learning implementation, cloud and local platform development. Lastly, Rhoé has an urban mobility branch which has worked on electric vehicle infrastructure projects in 40 different cities. Ideas, expertise and, sometimes, even personnel is shared between projects at Rhoé, creating multidisciplinary solutions to the hardest problems of making sustainability make business sense for the maritime sector.
